

Neuropsychiatric Service for Men

Cygnet Pindar House, Barnsley

Cygnet Pindar House is a new 22 bed Neuropsychiatric care and treatment facility opening in December 2019 for men affected by acquired brain injuries. It is a safe and secure place to aid recovery as well as offering those diagnosed with a progressive neurological disease, like Huntington's Disease, a caring and long term placement to support and help manage the progression of their symptoms. This service will be able to accept unplanned, often urgent admissions where a service user requires a safe place to start treatment at the earliest possible time.

The hospital is a modern purpose built facility that has been designed specifically to provide a clinically led evidence based neuropsychiatric pathway for those individuals presenting with behaviours that challenge. Our focus is to create a therapeutic rich environment which engages our service users and offers them the opportunity to minimise their challenging behaviour and maximise their independence.

We are able to accept men with complex physical health needs and have en-suite bedrooms located on the ground floor for men with mobility impairments.

We provide a resource intensive in-house Neuropsychiatry inter-disciplinary team dedicated to the 22 service users at Cygnet Pindar House. Our person centred approach puts the individual at the centre of their treatment and discharge planning. The service offers a wide range of activities and facilities to promote independent function. Positive behaviour goals are focused on discharge planning to support service users to return to community living – either with support or independently.

Male

18+

22 beds
